EXPERIENCE

The Walt Disney Company, Remote – Senior Software Engineer (Formerly I & II)

SEPT 2024 – PRESENT (PREV. MAR. 2019 – JULY 2023)

- Led frontend development for first party data team, building out internal application metric integrations. Used this data to support custom dashboarding solutions, building reusable declarative data fetching React components using Nivo.
- Enhanced business stakeholder efficiency by migrating off of complex Google Sheets and onto a modern, dynamic web application using React. Supported effort for tracking metrics related to title performance, demographics and market fit.
- Increased internal software engineer productivity by building a single pane of glass interface for engineers to find engineering resources across the company.
- Built Python API to collect and view build metrics in real time for CI/CD pipelines. Provided tangible KPI dashboarding solution to identify bottlenecks and job failures.
- Built internal JavaScript wrapper library to enable easy server side metrics collection from a variety of public facing applications. Provided simple, resilient metrics interface servicing high traffic sites such as ESPN.com, nationalgeographic.com and more.
- **Tools:** React, HTML/CSS, TypeScript, Nivo, Python, Shell Scripting, GitLab CI, AWS

Commerce Architects, Spokane, WA – Senior Frontend Software Engineer

JULY 2023 – SEPT. 2024

- Built an overhauled integration management interface for a large affiliate marketing company. Introduced engineers to best practices including TypeScript patterns, typesafe form validation logic, reusable Apollo Client middleware and more.
- Developed AI interface for Commerce Tools platform, showcased at 2024 Elevate conference.
- Led frontend engineering effort for Commerce Tools accelerator. Delivered a streamlined, full stack application template to increase developer velocity and improve relationship with Commerce Tools and other third party providers such as Contentful and Constructor.
- Mentored '23 intern class, coaching engineers on best practices for FE and cloud dev. Coached class through successful delivery of full stack developer scrum tool.
- **Tools:** NextJS, TypeScript, React, HTML/CSS, OpenAI, Commerce Tools Contentful, AWS

Orbital Shift, Missoula, MT – Software Developer Intern

JAN. 2017 – MAY 2018

- Launched mobile applications for Orbital Shift, enabling employees to track their time via convenient mobile application interfaces.
- Integrated push notifications using OneSignal to provide employees a timely way to find out about time off requests and shift swaps.
- Utilized Geolocation APIs to give managers piece of mind knowing workers are clocking in and out within a configured location.
- **Tools:** TypeScript, Angular, HTML/CSS, Ionic Framework

SKILLS

JavaScript & TypeScript. HTML/CSS. React 16+. Python/bash scripting.

Amazon Web Services (Compute, CloudFormation, Lambdas, API Gateway, CloudWatch, Dynamodb).

EDUCATION

University of Montana, Missoula, MT – Bachelors of Science

Major in Computer Science, Minor in Business, Dec. 2018
